SEPTIAN SAPUTRA

Product Manager & QA Automation — HR-Tech / Payroll Systems

Indonesia · Open to remote · jacyayan@gmail.com · +62 895-6391-57830
Portfolio: yayanseptiansaputra.github.io/septian-saputra-portfolio

SUMMARY

StafBook's first QA hire — on board before the login screen existed, with comprehensive product knowledge across every module on both web admin and mobile ESS: scheduling, attendance, leave, payroll, reimbursement, cash advance, loans, and approval workflows. Since July 2026 also leads Product Management, authoring product requirements from client need to shipped acceptance criteria, and built a 943-endpoint API regression platform with daily CI and automated bug filing, plus a safety-gated production verification suite.

EXPERIENCE

PT. Stafbook Teknologi Asia — Product Manager & QA Automation Lead

Jul 2026 – Present

Jakarta · First QA hire, joined before StafBook's login screen existed (2021); through PMO (2022–2023); took on Product Management and built the QA automation platform below together, starting July 2026

PRODUCT MANAGEMENT

- Lead the team's daily delivery rhythm: daily standup, sprint planning, and backlog grooming for the Product & Tech team, plus weekly product & engineering updates to executive leadership.
- Authored PRDs from client requirement to shipped acceptance criteria — including an overtime break-time policy change for a logistics client and a face-recognition attendance enforcement policy — resolving 20 open requirement questions through structured review with client, CX, and engineering.
- Partnered with backend engineering on code review for a tax-compliance release (25 commits, annual tax-slip calculation logic), surfacing calculation-accuracy findings ahead of release.
- Led the team's transition from Scrum to Scrumban: designed an 8-column Jira workflow board with WIP limits and component-based swimlanes, and automated CX ticket intake via an Airtable–Jira webhook integration.
- Ran vendor evaluations for AI coding and support tooling.

QA AUTOMATION & TEST ENGINEERING (BUILT SINCE JULY 2026)

- Filed 1,674 of the team's 4,574 Jira issues (36%) — the highest volume of any teammate — spanning bug reports, requirements, and QA tickets, sustained from manual QA days through today.
- Facilitate SIT and UAT cycles before every release, coordinating cross-functional sign-off between engineering, product, and client stakeholders — authored and signed off structured test cases (positive/negative, expected vs. actual) across 33 sprints of UAT and 12 sprints of SIT.
- Designed and built a 943-endpoint API regression platform for StafBook's HR/payroll backend (Playwright + TypeScript), running daily via CI (GitHub Actions, 02:00 WIB) with automatic, duplicate-free Jira bug filing.
- Engineered a 3-tier test-data architecture (read-only / write-safe / destructive) to run safe regression against a shared staging environment without corrupting production-bound data.
- Built and verified a production post-deployment suite (live on app.stafbook.com) under strict safety guards; proved 6+ feature releases directly on production — payroll prorata, tax withholding (PPh21/BPA1), and attendance changes.
- Surfaced 30+ candidate defects through systematic backend code analysis prior to runtime testing, and identified a critical payroll calculation bug (offboard + rehire mid-cycle) through reverse simulation.
- Own 301 committed automated tests across 64 specs (Playwright + TypeScript: 174 web end-to-end, 95 API regression, 32 production post-deploy) and 42 mobile flows (Maestro/Android); maintain 31 test-case documents covering 239 documented test cases, each traceable to a Jira ticket and the spec that runs it.
- UI testing across web and mobile: Playwright end-to-end specs, Maestro flows for Android, and AI-agent-driven browser automation (Claude in Chrome) that navigates and interacts with the UI autonomously for exploratory and regression checks.
- Built independent calculation oracles for Indonesian payroll tax (PPh21 TER & Pasal 17 progressive brackets) written from regulation text, not copied from the system under test.
- Designed a single-source-of-truth reporting pipeline: one JSON file generates a live web dashboard, a Google Sheet, and an 11-tab Excel archive, with pass/fail computed automatically rather than hand-typed.

PT. Stafbook Teknologi Asia — Project Management Office (PMO)

Sep 2022 – Jan 2023

- Tracked sprint progress, ran daily status reporting, and coordinated cross-functional teams to hold product delivery timelines.

Independent QA Engineering (Contract / Part-time)

2025

Functional, regression, and security testing across telecom (VoIP prison-communication platform, FastUse), fintech (digital payments, Bilpay), GovTech (OSINT intelligence platform, Vyasa), and messaging infrastructure (WhatsApp bulk-messaging, Echo).

SKILLS

QA & Test Automation: Jira, Claude Code, Playwright, TypeScript, Maestro (Android/mobile), UI testing (web & mobile), AI-agent browser automation (Claude in Chrome), API test design, GitHub Actions CI/CD

QA Practice: Regression & E2E strategy, exploratory testing, root-cause analysis, severity triage, risk-based test scope, SIT/UAT facilitation

Product: PRD authoring, requirement discovery & clarification, acceptance criteria, stakeholder negotiation, Agile / Scrumban

Domain: Indonesian payroll & tax compliance (PPh21, BPA1/Bukti Potong, BPJS, prorata), HR-tech systems

Tools: Airtable, Git, Postman

AI Content Production: Midjourney, ChatGPT, ElevenLabs, HeyGen, Flow AI — used across independent multi-agent build and publishing projects

INDEPENDENT PROJECTS

- **Agentic Studio —** designed a 6-role AI agent orchestration system (PM, UI/UX, Backend, Frontend, QA, Mobile) that plans, builds, and ships web features autonomously; the QA role runs real automated tests, not model judgment, with an auto-retry fix loop escalated to a human after 3 failed attempts.
- **FoodInsideAI —** produced two data-driven digital ebooks (90 and 73 pages) end-to-end — sourced and regulation-checked nutrition/ingredient data (BPOM, TKPI, USDA) with 160–350+ cited sources per title — plus the companion Instagram channel (@food.insideai) distributing them: 2,666 organic followers in under 3 weeks, 1.75M views in 30 days, one video reaching 1M views in ~3 days, top single video 1.5M views — built with Midjourney, ElevenLabs, and Flow AI.
- **Hidden.Indo —** produce breaking-news-style tech/finance content for a second brand across Instagram, TikTok, and Facebook, using the same AI production stack.

EARLIER EXPERIENCE

Audio Engineer — Zeno Record | Jun 2017 – Sep 2022

Medical Representative — PT Kalbe Farma, Tbk | Nov 2017 – Jan 2018

Account Officer — Koperasi SBM | Jul 2014 – Oct 2017

AWARDS & CERTIFICATES

Quality Assurance Achievement (2024): resolved 70+ critical bugs, improving application stability by 30%; streamlined QA processes and documentation, cutting development cycles by 20%; 100% success rate in UAT, earning commendations from key clients.

Certificate of Appreciation — Merdeka Siber (Oct 2024): participant in a bug bounty hunter sharing session.

EDUCATION

SMA Negeri 1 Cluring — Science Major | 2011 – 2014
