SEPTIAN SAPUTRA

Product Manager — HRIS & Payroll SaaS

Indonesia · Open to remote · jacyayan@gmail.com · +62 895-6391-57830
Portfolio: yayanseptiansaputra.github.io/septian-saputra-portfolio

SUMMARY

Product Manager for HRIS and payroll SaaS (HR-Tech) who came up through QA: StafBook's first QA hire, with 5+ years of hands-on knowledge of every module on web admin and mobile. Turns client complaints into PRDs with explicit acceptance criteria and worked examples, resolves open requirement questions with client, CX, and engineering, and runs the team's daily delivery rhythm and executive updates. Strong in Indonesian payroll and tax rules (PPh21, BPA1, BPJS, prorata) and in AI-assisted product workflows.

EXPERIENCE

Product Manager & QA Automation Lead Jul 2026 – Present

PT. Stafbook Teknologi Asia (StafBook, HRIS & payroll SaaS) · Jakarta

PRODUCT MANAGEMENT

- Authored PRDs from client requirement to shipped acceptance criteria, including an overtime break-time policy change for a logistics client and a face-recognition attendance enforcement policy; resolved 20 open requirement questions through structured review with client, CX, and engineering.
- Specified payroll prorate “Hari Kerja Tetap” (calendar range → actual attendance): new formula, cycle-status rule, and five worked payslip simulations; all 9 parts passed QA in Sprint 47.
- Lead the Product & Tech team's daily delivery rhythm (daily standup, sprint planning, backlog grooming, retrospectives) and give weekly product & engineering updates to executive leadership.
- Led the team's transition from Scrum to Scrumban: designed an 8-column Jira workflow board with WIP limits and component-based swimlanes, and automated CX ticket intake via an Airtable–Jira webhook integration.
- Use Claude as an AI-assisted workflow for meeting preparation, documentation, reporting, sprint planning, and backlog refinement; analyse repositories and cross-reference PRDs, specs, Jira tickets, and code to catch requirement gaps before development.
- Partnered with backend engineering on code review for a tax-compliance release (25 commits, annual tax-slip calculation logic), surfacing calculation-accuracy findings ahead of release.
- Ran vendor evaluations for AI coding and support tooling.

QUALITY ENGINEERING THAT BACKS PRODUCT DECISIONS

- Designed and built a 943-endpoint API regression platform for StafBook's HR/payroll backend (Playwright + TypeScript), running daily via CI (GitHub Actions, 02:00 WIB) with automatic, duplicate-free Jira bug filing.
- Own 301 committed automated tests across 64 specs (174 web end-to-end, 95 API regression, 32 production post-deploy) plus 42 mobile flows (Maestro/Android); 31 test-case documents cover 239 test cases, each traceable to a Jira ticket and the spec that runs it.
- UI testing across web and mobile: Playwright end-to-end specs, Maestro flows for Android, and AI-agent-driven browser automation (Claude in Chrome) that navigates and interacts with the UI autonomously for exploratory and regression checks.
- Built a production post-deployment suite (live on app.stafbook.com) under strict safety guards; proved 6+ feature releases directly on production, including payroll prorata, tax withholding (PPh21/BPA1), and attendance changes.
- Built independent calculation oracles for Indonesian payroll tax (PPh21 TER and Pasal 17 progressive brackets), written from regulation text rather than copied from the system under test.

Scrum Master Oct 2025 – Jun 2026

PT. Stafbook Teknologi Asia

- Acted as liaison between Product Owner, Development Team, QA, and stakeholders to align business goals with sprint priorities.
- Removed impediments and coached the team to improve productivity, collaboration, and delivery quality.
- Monitored sprint progress using Agile metrics such as velocity, burndown charts, and sprint reports.

Quality Assurance Engineer Sep 2021 – Jun 2026

PT. Stafbook Teknologi Asia

- StafBook's first QA hire, on board before the login screen existed; built product knowledge across scheduling, attendance, leave, payroll, reimbursement, cash advance, loans, and approval workflows on both web admin and mobile.
- Led QA for HR tech solutions across web and mobile: designed detailed test cases, executed SIT and UAT, improved documentation, and worked with cross-functional teams to ensure release readiness.
- Facilitate SIT and UAT cycles before every release, coordinating sign-off between engineering, product, and client stakeholders; structured test cases across 33 sprints of UAT and 12 sprints of SIT.

- Filed 1,674 of the team's 4,574 Jira issues (36%), the highest volume of any teammate, sustained from manual QA days through today.

Project Management Office (PMO) Sep 2022 – Jan 2023

PT. Stafbook Teknologi Asia

- Tracked sprint progress, ran daily status reporting, and coordinated cross-functional teams to hold product delivery timelines.

Independent QA Engineer (Contract / Part-time) 2025

- Functional, regression, and security testing across telecom (VoIP prison-communication platform, FastUse), fintech (digital payments, Bilpay), GovTech (OSINT platform, Vyasa), and messaging infrastructure (WhatsApp bulk-messaging, Echo).

Social Media Content Creator (AI-driven) Jun 2022 – Present

Freelance Projects

- Developed AI-driven content strategies and prompts to automate posts and captions, increasing engagement across Instagram.
- **FoodInsideAI**: two data-driven ebooks (90 and 73 pages) and a companion Instagram channel (@food.insideai) that reached 2,666 organic followers in under 3 weeks and 1.75M views in 30 days, built with Midjourney, ElevenLabs, and Flow AI.
- **Hidden.Indo**: produce breaking-news-style tech and finance content across Instagram, TikTok, and Facebook using the same AI production stack.

INDEPENDENT PROJECTS

- **Agentic Studio**: designed a 6-role AI agent orchestration system (PM, UI/UX, Backend, Frontend, QA, Mobile) that plans, builds, and ships web features from a human owner's intent; the QA role runs real automated tests (pass/fail from exit codes, not model judgment) with an auto-retry fix loop that escalates to a human after 3 failed attempts.
- **FollowUp Revenue** (personal part-time project): built a WhatsApp re-engagement SaaS on Next.js and Supabase with a 90-test Playwright suite; currently validating demand with local businesses.

EARLIER EXPERIENCE

Audio Engineer — Zeno Record Jun 2017 – Sep 2022

Medical Representative — PT Kalbe Farma, Tbk Nov 2017 – Jan 2018

Account Officer — Koperasi SBM Jul 2014 – Oct 2017

AWARDS & CERTIFICATES

- **Quality Assurance Achievement** (2024): resolved 70+ critical bugs, improving application stability by 30%; streamlined QA processes and documentation, cutting development cycles by 20%; 100% success rate in UAT, earning commendations from key clients.
- **Certificate of Appreciation — Merdeka Siber** (Oct 2024): participant in a bug bounty hunter sharing session.

SKILLS

Product: Product management, PRD authoring, requirement discovery & clarification, acceptance criteria, stakeholder management & negotiation, backlog prioritisation

Domain: HRIS, Indonesian payroll & tax compliance (PPh21, BPA1/bukti potong, BPJS, prorata), HR-tech systems

Agile & Delivery: Scrum, Scrumban, sprint planning, backlog grooming, retrospectives, Jira workflow design, WIP limits, executive reporting, SIT/UAT coordination

AI & Automation: Artificial intelligence, generative AI, prompt engineering, AI agents & AI-assisted workflows, Claude Code, ChatGPT, Midjourney, ElevenLabs, HeyGen, Flow AI

QA & Test Automation: Playwright, TypeScript, Maestro (Android/mobile), UI testing (web & mobile), AI-agent browser automation (Claude in Chrome), API test design, Postman, Jira, GitHub Actions CI/CD, Claude Code, Git

EDUCATION & LANGUAGES

SMA Negeri 1 Cluring — Science Major (IPA) 2011 – 2014

Languages: Indonesian (native), English (intermediate)
